## Build a Butterfly or Bee

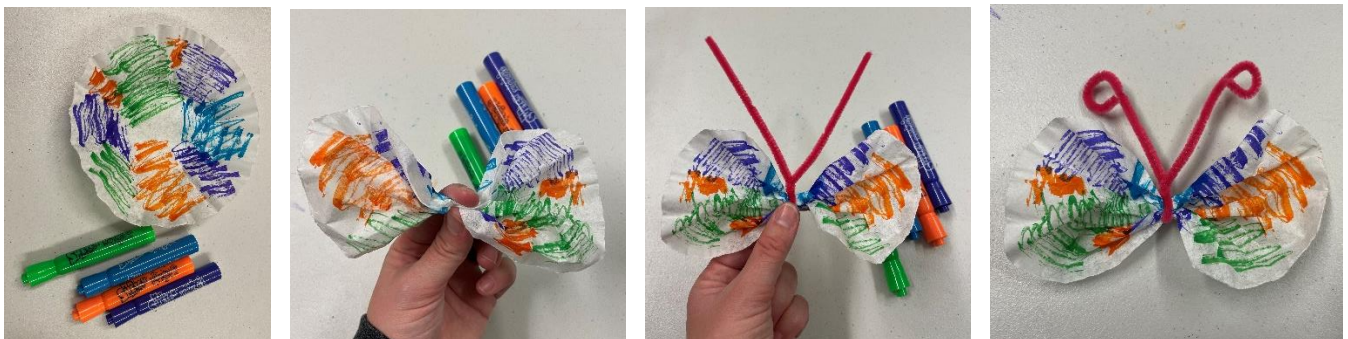

Pollinators, like bees and butterflies, move pollen from flower to flower. With this craft, little ones can make their own butterfly or bee.

### You'll need:

- 3-4 pipe cleaners of different colors
- Glue
- Coffee filter or other paper
- Markers or watercolor paints

### What to do (butterfly):

1. Color the coffee filter with markers or watercolor paint and let dry.
2. Scrunch the middle of the coffee filter together and loop the pipe cleaner around, twisting a few times to hold in place.
3. Twist the ends of the pipe cleaner into loops to make the antenna.

### What to do (bee):

1. Twist two pipe cleaners of different colors together.
2. Twist them around your finger or a wooden spoon handle and tuck in the ends.
3. Cut two two-inch pieces from the white pipe cleaner.
4. Twist the ends of one piece to make a teardrop shape for the wing. Repeat for the other wing.
5. Put wings into the "bee" pipe cleaners, secure with glue, and let dry.
