Helicopters and Airplanes

There are lots of things with wings. Animals like bats and birds have wings, and so do many insects like bees, butterflies, and ladybugs. Human inventions like airplanes, spaceships, and helicopters also have wings.

You'll need:

- Helicopter template
- Paperclip
- Scissors
- Optional: Paper

What to do:

1. Cut out the helicopter template.
2. Fold on the dashed lines.
3. Attache a paperclip to the bottom.
4. Drop and watch what happens. Try dropping from different heights or outside in the wind. What happens to the helicopter?

Optional: use paper to make a paper airplane. How far does it fly?
